

Providence Hospital has a new Hepato-Pancreato-Biliary (HPB) Program

This specialized service focuses on diseases of the liver, gallbladder, bile ducts, pancreas, and duodenum.

Services include:

- Minimally invasive laparoscopic surgery
- Multidisciplinary team approach with surgeons, gastroenterologists, radiologists, medical and radiation oncologists
- Individualized care plans for each patient
- Robotic assisted general surgery
- Utilization of clinical pathways
- Protocols to address pain control

We maintain continuing communication with referring physicians and ensure involvement in their patient's medical management throughout the process. Our goal is to successfully attend to your patients' needs and then return them back to you.

Hepato-Pancreato-Biliary (HPB) Nurse Practitioner

Functions of HPB Nurse Practitioner:

- Act as a liaison between surgery, oncology, and Primary Care Provider (PCP)
- Educate patients and families regarding their diagnosis and plan of care
- Engage patients in navigating the complex health care system in a timely fashion
- Drive appropriate follow up care
- Ensure prompt surgical evaluation
- Participate in the management of patient care to provide seamless care
- Organize multidisciplinary evaluation, recommendations and subsequent approach to patient care
